Personal statement:

As a physician and holistic medical professional with the deepest of convictions, I see holistic medicine as a combination of traditional medical teachings, regulatory medicine, psychotherapy, naturopathic procedures and all complementary medical methods. The “entire” human being is at the very center of the treatments I apply. Accordingly, I accompany people on their path to healing and approach everyone on their individual physical, emotional-mental, as well as spiritual level.

Based on the expertise of my original professional (aviation technician and electrical engineer specialized in medical engineering) I developed my own holistic medical diagnostic and therapy system during my therapeutic and medical practice of more than 32 years. These are currently being applied successfully in numerous complementary and holistic medical practices.
